DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, lines 4, 5, 15, and 15, the applicant has positively recited the combination of the ladder assembly, the vertical walls of the building, and the building support members. It is suggested the applicant use the phrase "adapted to" when referring to unclaimed elements. Claims 2-4, 6, 10, 13, and 16 recite similar ambiguities with respect to structural members, building supports, floor joists, wall studs, wall, building floor, etc.

With respect to claim 2, line 3, "through one the opening in side of the enclosure and structural member", appears to be grammatically incorrect.

With respect to claims 1-15, line 1, "escape ladder" should read --escape ladder assembly--.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3634

Claims 1, 2, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Strohmeyer #4,127,184. Strohmeyer, as best seen in Figures 1 and 2, discloses a building wall supported escape ladder assembly 10 comprised of enclosure 26, enclosure sidewalls 30, 32, support rod 24 that extends through the sidewalls, removable front portion/cover panel 60, latch assembly 80, 82, collapsible ladder 38 that is supported by the support rod, flexible rail/support members 42, and ladder support hooks 22.

Claims 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Aarons #433,061. Aarons discloses, as recited in lines 13-50, an escape assembly comprised of support rod "E" that is spaced and secured between studs/timbers "b", rod fasteners "e", "f", "F", enclosure/opening "D", ladder assembly "I", "J", and the method by which the escape assembly is secured and used.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Strohmeyer as applied to claims 1, 2, 7, and 8 above, and further in view of Jacobson #5,971,105. Strohmeyer ails to disclose the cover secured to the enclosure by means of VELCRO. Jacobson, as recited in column 4, lines 55-58, teaches the utility of an escape assembly enclosure 40 having a cover panel 58 secured thereto by means of VELCRO, so as to allow easy removal of the cover panel

Art Unit: 3634

from the enclosure 40 when so desired. Therefore, to one of ordinary skill in the art, it would have been obvious to provide the escape assembly of Strohmeyer with a cover secured to an enclosure by VELCRO, as taught by Jacobson, so as to allow easy removal of the cover panel from the enclosure when so desired.

Allowable Subject Matter

Claims 3-6, and 11-15, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim, any intervening claims, and in addition to claim 10, rewritten to overcome the Section 112 ambiguities as noted above. The primary reason for the allowance of claim 3 is the inclusion of a releasable lock that holds the support rod in the enclosure. For claim 6, it is the inclusion of an L-shaped enclosure having a lower portion that is adapted to fit between floor joist and an upper portion that is adapted to fit between wall studs. For claim 10 it is the inclusion of an axial securing means, the securing mean defined as threaded nuts that thread onto the support rod to secure the support rod to adjacent studs. The prior art of record fails to teach or suggest the claimed features absent the applicant's own disclosure.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Martin et al #6,135,239, Shupp, Jr. #6,129,178, Matisi #5,628,380, Krumal #5,467,841, Longenecker #4,445,59, Driskell #4,079,811, Boscarino, Jr. #3,344,886, and Rumsey GB#2,156,888 are cited to teach ladder escape assemblies.
